

Cookies

We use cookies on our website. Cookies are small text files downloaded on to your computer by the websites you visit. They are widely used to allow websites to work or to work more effectively and also to supply information to website owners.

The cookies we use are very important to record the choice of language, gather data together and analyse your use of the website via Google Analytics. You may delete and block all the cookies from this website, but certain parts of the website will not work.

Google Analytics is a tool that permits website owners to assess the way users interact with the website content. When a user browses from one webpage to another, Google Analytics supplies the website owners with tags in JavaScript (libraries) to record information about the page the user has visited, for example, the URL of the page. Google Analytics' JavaScript libraries use HTTP cookies to "remember" what a user has done on previous pages / interactions with the website.

Most web browsers allow control of most cookies via browser settings. To learn more about cookies, including how to see cookies that have been saved and how to manage and delete them, visit the website www.allaboutcookies.org.
